

Muhammad Bilal

Frontend Developer | learning Full-Stack Development

I'm a Frontend Developer learning Full-Stack Development. I enjoy building modern web applications and improving my skills through practical projects.

TECH STACK & TOOLS

HTML5	CSS3	JavaScript	TypeScript	React
Next.js	Tailwind CSS	Redux	Vite	Node.js
Express.js	MongoDB	Git	GitHub	VS Code

WORK EXPERIENCE

2024 - Present

Software Development Trainee

Professional Software Development Course - Jawan Pakistan

I have completed a Professional Software Development course from Jawan Pakistan, where I gained hands-on experience in HTML, CSS, JavaScript, React, Tailwind CSS, Next.js, and TypeScript. I started my web development journey in 2024 and have built a foundation in modern frontend development through consistent practice and real-world projects. During my training, I developed projects including a Student Management System, a Contact Book Application, and several responsive web applications. These projects helped me understand component-based architecture, state management, routing, and responsive design. I also use Git and GitHub for version control and focus on writing clean, maintainable code. Currently, I'm expanding my skills into backend development, including Node.js, Express.js, and MongoDB, so that I can build full-stack applications.

PROJECTS

LogoVines

PROJECT PREVIEW

LogoVines

A modern logo gallery platform for uploading and showcasing logos.

Live Demo | Source Code

JSProjectForge

PROJECT PREVIEW

JSProjectForge

A platform featuring beginner-to-advanced web development projects.

Live Demo | Source Code

DumData

PROJECT PREVIEW

DumData

A fake data generator that helps developers create realistic mock data for apps and APIs.

Live Demo | Source Code

MailVines

PROJECT PREVIEW

MailVines

Free temporary & disposable email.
